

Med Gold Perennial Ryegrass Blend

STRENGTHS:

- A blend of Jacklin's best ryegrasses.
- Endophyte enhanced for improved insect resistance.
- Superior density in closely mown turf.
- Exceptional dark green color.
- Improved disease resistance.

PRODUCT DESCRIPTION:

Med Gold is comprised of three vigorous perennial ryegrass varieties (such as **Accent**, **Caddieshack**, **Monterey II**, **Top Gun**). The varieties selected for this blend show improved seedling vigor and exhibit overall tolerances of common diseases and pests in turf.

RECOMMENDED USES:

Med Gold is formulated for both permanent northern turf and southern dormant bermudagrass overseeding. On permanent turf, **Med Gold** is used for rejuvenating thin, heavily trafficked or diseased turf or where rapid turf replacement is necessary. When overseeded into dormant bermudagrass in the South **Med Gold** produces both an excellent playing surface for sports and a great looking lawn for home and commercial landscapes. It is particularly suited to golf course and athletic field turf because of its excellent tolerance to traffic, compacted soil, low clipping heights, and its ability to establish rapidly. **Med Gold** tolerates medium to high maintenance in full sun to partial shade.

SEEDING RATES, PERMANENT TURF:

Establishment:		200 - 275 lbs./acre
Interseeding:	20 - 50% cover:	175 - 200 lbs./acre
	50 - 75% cover:	100 - 175 lbs./acre

DORMANT BERMUDAGRASS OVERSEEDING:

Greens	25 - 40 lbs./1,000 sq. ft.
Fairways	200 - 500 lbs./acre
Athletic Fields and Landscapes	7 - 20 lbs./1,000 sq. ft.
